

USING AI TO INVESTIGATE THE
EFFECTS OF CENTRAL BANK
COMMUNICATIONS:
*IT'S NOT JUST WHAT THEY, SAY
BUT HOW THEY SAY IT!*

*Michelle Alexopoulos, Department of
Economics & Faculty of Information,
University of Toronto*

BASED ON A PROJECT WITH...

Xinfen Han, Bank of Canada

Oleksiy Kryvtsov, Bank of Canada

Xu Zhang, Bank of Canada

LINK: <https://ideas.repec.org/p/tor/tecipa/tecipa-737.html>

Disclaimer: The views expressed are solely those of the researchers and do not necessarily reflect the views of the Bank of Canada.

OVERVIEW OF PROJECT

- Examine the importance and impact of the U.S. Federal Reserves' policy communications
- Measure aspects of communication (AI, NLP, etc.)
- Test if (and how) words chosen, body language, & tone of voice effect S&P500 and the VIX

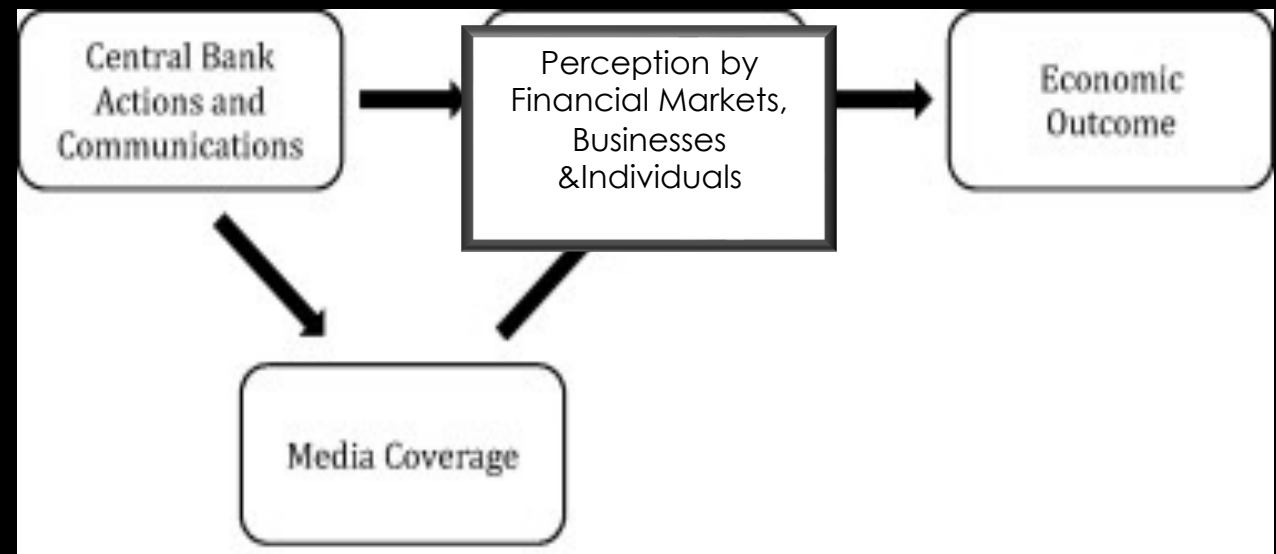

IMPORTANCE OF POLICY COMMUNICATION

Monetary policies (e.g., interest rate, forward guidance, QE, etc.)

- Have large impacts on the welfare of businesses and individuals
- Are often complex

To Be Effective, Central Bank Communication needs to:

- Be Accurate
- Be Clear
- Be Perceived as Credible
- Reach target audience

WHAT MAKES UP POLICY COMMUNICATION?

EXAMPLES OF DIRECT COMMUNICATION

"...the Committee decided to raise the target range for the federal funds rate to 3/4 to 1 percent and anticipates that ongoing increases in the target range will be appropriate..." FOMC statement May 4, 2022 @2pm

EXAMPLES OF INDIRECT COMMUNICATION

The New York Times

Powell Pledges to Maintain Economic Support

For now, "the economy is a long way from our employment and inflation goals, and it is likely to take some time for substa...

Jul 1, 2021

Tiffany Thomas @wealthytiffany · 2h

Fed Holds the Course at September 2021 Meeting

Fed Chair Powell issued an upbeat report after the Sept. 2021 FOMC meeting, signaling no immediate policy changes.

investopedia.com

Fed Holds the Course at September 2021 Meeting
Fed Chair Powell issued an upbeat report after the Sept. 2021 FOMC meeting, signaling no immediate...

WHAT FORMS THE MESSAGE?

ELEMENTS OF COMMUNICATION: MORE THAN WORDS

- Have you heard the statement over 90% of communication comes from body language & tone of voice?
 - 55% body language, 38% tone, 7% words popularized by (Mehrabian 1971)

WE EXPLORE WHAT IMPACTS (IF ANY)
FACIAL EXPRESSIONS, TONE OF VOICE AND
WORDS CHOSEN HAVE ON MARKETS?

WHY BODY LANGUAGE & TONE OF VOICE MIGHT MATTER...

1. Traders (institutional or retail) watch communication and either:
 - i. Signals directly affected their trades (i.e., actively watching for signals)
 - ii. Signals impact traders sentiment/confidence which affects their trading behaviour

Direct Channel

The screenshot shows a YouTube live stream of a Federal Reserve press conference. Jerome H. Powell is seated at a table with microphones, with a nameplate in front of him that reads "THE HONORABLE JEROME H. POWELL". To his right, a woman is partially visible. The video player shows a progress bar at 5:57:09. The top of the browser window displays various market data, including stock prices and indices. On the right side, there is a chat window with a "Top chat replay" section and a "Pinned by FX Evolution" message. The chat contains several comments from users, including "bullrocket", "Fidget Spinner Mania", "Toiga Yildizli", "M.B.", "Richard Samuels", "So Ho", "Nopehaholwut", "So Ho", "chuanJ", "Matthew Oldfield", "Marvin the Martian", and "chuanJ". The bottom of the screen features a "Risk Warning: This Stream Is Not Financial Advice!" banner and a "201" logo. The overall layout suggests a professional trading environment.

WHY BODY LANGUAGE & TONE OF VOICE MIGHT MATTER...

2. Media reports on the event they watched and the soft forms of communications influenced their message/coverage of events *AND* the behaviour of traders watching is impacted (consciously or unconsciously)

"...So we all heard what Yellen was saying, but what about her body language...in one of the clips you watched, **her arms cross, the eyebrows go up and that's a sign of insecurity....she was much more secure when talking about monetary policy than financial regulatory policy** ... every time she tried talked, she got cut off, **you saw the frustration and anxiety**... If we did this with Bernanke, there were times Bernanke's **voice got so shaky** ...there were."

- CNBC Streets Signs (February 11, 2014).

**Indirect
Channel**

WHY BODY LANGUAGE & TONE OF VOICE MIGHT MATTER...

3. Algorithmic trading uses these signals as inputs to algorithms

Automated Channel

Fed Communication

TO STUDY THE EFFECTS OF THE MESSAGE & THE MESSENGER WE NEEDED ACCESS TO:

Traditional data

- E.g., stock market data)

Non-traditional data (*often in copyright*)

- Text
- Video

Lots of storage (behind firewalls)

- frame info (~29.97 per sec)
- Tick-by-tick stock data

Ample computing power

- GPU capability
- Lots of memory

Tools (and/or RAs to program!)

- Open source
- Software packages

THE PROJECTS' DATA SOURCES

From Internet Archive

- TV Archive Content
 - CSPAN
 - CNBC
 - Bloomberg TV
 - House & Senate Videos

Other Sources/Providers

- Other Videos:
 - CSPAN Archive + Youtube + Gov't Archives
- Textual
 - CQ RollCall + Lexis-Nexus + HathiTrust + Factiva + Twitter
- Financial Data
 - TickData + Refinitiv + CME + WRDS (TAQ)

WHY DO WE FOCUS ON TESTIMONIES?

- Don't occur on same day as a policy announcement
- Followed by Fed watchers and investors
- Wide Media Coverage (as large as Press conferences)
 - TV (CSPAN, CNBC, Bloomberg)
 - Newspapers and Wires
 - Bloomberg Terminal

***High quality TV footage & Transcripts are available in the archives & in our library collections!

STRUCTURE OF SEMI-ANNUAL TESTIMONIES (~2-3HRS)

Two congressional testimonies, within a day or two days, alternate

- ▶ the House Financial Services committee
- ▶ the Senate Banking, Housing, and Urban Affairs committee

**Same remarks
given by Fed Chair
Day 1 & 2

HOW DO WE USE THE DATA SOURCE?

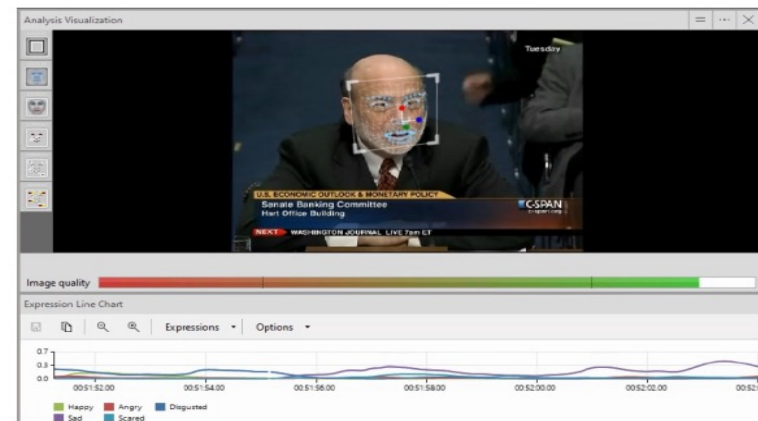

MEASURING EMOTIONS IN COMMUNICATIONS USING THE RESOURCES & TOOLS

Testimony data: an example from March 1st, 2011

From the transcript:

| Speaker | Sentence |
|-----------|--|
| MENENDEZ: | And so would you give me your view of how the first and second rounds of quantitative easing are working? |
| BERNANKE: | I think they're working – I think they're working well. The first round in March 2009 was almost – almost the same day as the trough of the stock market. Since then, the market has virtually doubled. The economy was going from total collapse at the end of the first quarter of '09 to pretty strong growth in the second half of '09. And as I said, it's now in the seventh quarter of expansion. |

From the video:

UNITS FOR ANALYSIS: BLOCKS OF TEXT

- Blocks of text
 - Remark section:
 - 10 sentences (~ 1 min)
 - Typically remark section 15 min
 - Q&A section:
 - by round (~5 min) for full sample
 - By individual question-answer pairs (>15s)
 - Average testimony 2.5 hours with 21 Q&A blocks

***Block by sentences allows for coherent analysis of content and emotion in statements

USING THE TEXT

PRIMARY TEXT-BASED SENTIMENT MEASURE

BERT Language Model

- Fine-tuned BERT model with labels from 2 testimonies to get sentiment for each sentence
- Fine-tuned model outperformed standard BERT and Fin-Bert (based on F1 Scores)
 - (Sensitivity based on trained version using testimonies outside 32)

SAMPLE OF AKHZ SENTIMENT LABELS

| | | |
|----------|---|----|
| Bernanke | It certainly did have some negative effects. | -1 |
| Bernanke | The increased financial concerns led to declines in the stock market, increased credit spreads, and was one of the reasons why we marked down our outlook for the U.S. economy. | -1 |
| Bernanke | That's absolutely right. | 0 |
| Bernanke | I think that, first, I think that situation is improving. | 1 |
| Bernanke | Confidence has been coming back in part because of the Federal Reserve support for the dollar funding markets. | 1 |

BLOCK AHKZ SENTIMENT MEASURE

- Classified Sentiment for each sentence into Positive (+1), Neutral (0), Negative (-1)
- For testimony t in block b , testimony τ , speaker i ,

$$TEXT_{\tau,b}^i = \text{mean}(T0_{\tau,b}^i) / SD_{TEXT}^i$$

Where $T0_{\tau,b}^i$ is the sentiment scores for i 's sentences in block b , testimony τ

Text measure is normalized by standard deviation across all testimonies

- Sentiment is calculated for both Fed Chair & Senators/Congressional Representatives

OTHER TEXT-BASED MEASURES

Dictionary Based

- Dovish/Hawkish measure
 - Identifies specific keywords in each sentence and uses rules to define hawkish/dovish sentiment
 - Lexicon from Gorodnichenko et al (2022)

Table 2. Dictionary for hawkish and dovish words.

| | |
|---|---|
| Panel A1 | Panel A2 |
| inflation expectation, interest rate, bank rate, fund rate, price, economic activity, inflation, employment | anchor, cut, subdue, declin, decrease, reduc, low, drop, fall, fell, decelarar, slow, pause, pausing, stable, non-accelerating, downward, tighten |
| Panel B1 | Panel B2 |
| unemployment, growth, exchange rate, productivity, deficit, demand, job market, monetary policy | ease, easing, rise, rising, increase, expand, improv, strong, upward, raise, high, rapid |
| Panel C | |
| weren't, were not, wasn't, was not, did not, didn't, do not, don't, will not, won't | |

Notes: This table shows the words/phrases used to classify text into dovish/hawkish.

Bert Fine-Tuned Stance Metric

- Based on combination of labelled data from Gorodnichenko et al (2023) + labelled data from 3 additional testimony transcripts (outside 32)

VOCAL EMOTION

CONSTRUCTION OF VOICE MEASURE

Similar approach to Dietrich et al. (2018); Dietrich et al. (2019)

- ▶ Sentences timestamps: forced alignment algorithm
- ▶ Parse audio to sentences level
- ▶ Audio analysis: Praat
- ▶ Produce pitch data (F0- fundamental frequency) at 15ms intervals for each person
 - ▶ 60 - 180Hz for man, 160 - 300Hz for woman
- ▶ High pitch associate with active and intensified emotions

CONSTRUCTION OF VOICE MEASURE

Block Level Voice-emotion index for speaker i block b , testimony τ , is defined as:

$$VOICE_{\tau,b}^i = \text{mean}(F0_{\tau,b}^i - \overline{F0^i}) / SD_{VOICE}^i$$

- Measures created for both Fed Chair and Senators/Congressional Representatives
- Demeaned for different groups (Yellen, Bernanke, Senate + Congressional reps)
- Standard deviations for chair and Senate+ Congressional reps calculated across all testimonies

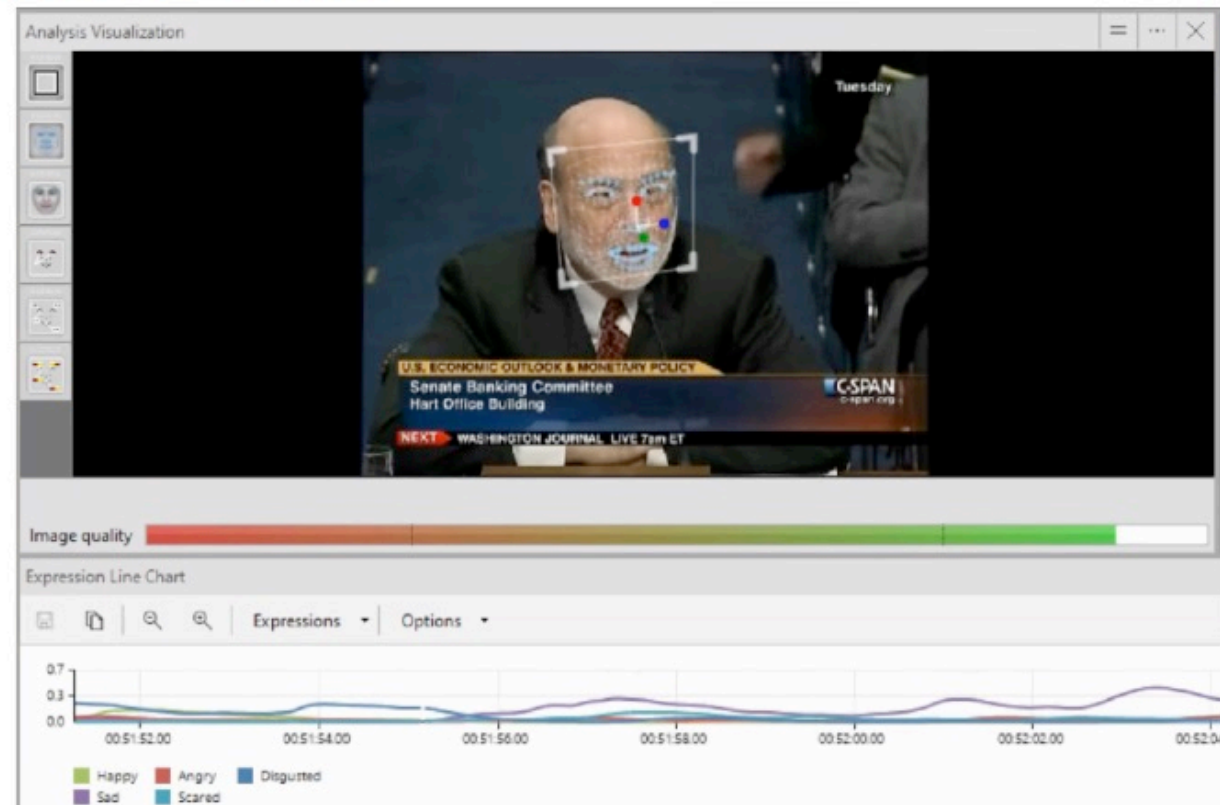

FACIAL EMOTIONS

FACEREADER OUTPUT

Emotion data construction (base):

- ▶ FaceReader emotions

OUR PREFERRED APPROACH:

1) Use software to identify facial action units (AUs)

****models to extract facial emotion from Microsoft, Facereader etc. are not trained on people talking**

► Manual construct facial emotion data using AUs

OUR PREFERRED APPROACH:

2) Use mapping from facial AUs to emotions from psychology literature & remove AUs related to the mouth

Facial emotions are the combination of action units

| Emotion | Action Units |
|---------|--------------|
| Sad | 1+4 |
| Fear | 1+2+4+5 |
| Angry | 4+5+7 |
| Disgust | 9 |

3) MS Video indexer (cross-checked manually) to identify 166 participants

FACIAL EMOTION MEASURE'S CONSTRUCTION

- Frequency: 30 frames per second to capture micro expressions and macroexpressions
- The Face metric is based on the averaged scores of upper FACs associated with negative emotions for i block b, testimony τ , normalized by the standard deviation:

$$FACE_{\tau,b}^i = \text{mean}(Facescore_{\tau,b}^i) / SD_{FACE}^i$$

Where $Facescore_{\tau,b}^i$ is the set of scores -0.25 (Sad + Angry + Fear + Disgust) for each frame (f) containing the face of individual i in testimony τ

- Measures created for both Chair and Senators/Congressional Representatives
- Standard deviation is calculated across all testimonies

Note: Higher value of index means less negative emotions expressed.

FINANCIAL MARKET DATA

Tick-by-tick data

Focus on S&P, VIX & Eurodollar futures

HIGH FREQUENCY ALIGNMENT OF DATA

- Emotion data (3 dimensions) is aligned by sentence
 - Generated timed transcripts at the sentence level from audio and CQ-Rollcall transcripts released the day of testimony (Forced alignment algorithm)
 - Facial metrics merged using timestamps from the corresponding audio

HIGH FREQUENCY ALIGNMENT OF DATA

- New method for alignment across sources to eliminate noise
- Emotion measures aligned with real time financial data through use of:
 - CNBC live coverage timestamps with S&P real time data onscreen
 - CSPAN live coverage timestamps
 - Testimony official start time & end time

**Result is a dataset that aligns different data very precisely so High Frequency analysis can be done.

MINE BREAKING NEWS FOR CONTROLS

****Creates a High Frequency news series that is classified by type**

We drop the blocks that overlap with market-wide breaking news that are not related to the testimony.

METHODS: LOCAL PROJECTIONS AND DIFF-IN-DIFF TYPE REGRESSIONS

Local projections

$$\begin{aligned} Outcome_{t,b+h} - Outcome_{t,b} = & \beta_{\text{TEXT}}^{(h)} \text{TEXT}_{tb} + \beta_{\text{VOICE}}^{(h)} \text{VOICE}_{tb} + \beta_{\text{FACE}}^{(h)} \text{FACE}_{tb} \\ & + \text{controls} + \text{constant} + \varepsilon_{tb}^{(h)} \end{aligned}$$

Outcome: the outcome variable (e.g., the log price of S&P 500)

t: testimony date; b: end of block b; b+h: h minutes after the block b

Controls:

- ▶ testimony fixed effects
- ▶ dovish/ hawkish sentiment based on Gorodnichenko et al 2021

Parameters of interests: $\beta_{\text{TEXT}}^{(h)}$, $\beta_{\text{VOICE}}^{(h)}$, $\beta_{\text{FACE}}^{(h)}$, $h = 1, 2, 3, \dots$

*in Q&A section controls also include fraction Chair's sentences, voice hear and face onscreen and Members text, voice and facial expressions, and lags of the variables.

SUMMARY OF RESULTS

- ▶ Text, voice and facial emotions in testimonies move financial markets (indexes not significantly correlated)
- ▶ Magnitude of impacts are different between Remarks and Q&A portions
- ▶ Magnitudes of responses grow in the days following the testimony
- ▶ Responses to sentiment in text, face and voice can differ significantly across topics
- ▶ Responses may also differ by Fed Chair
- ▶ Congressional members' emotions can also affect markets
- ▶ Using “off the shelf” tools can give unintuitive results

HOW CAN LIBRARIES SUPPORT THIS
TYPE OF RESEARCH?

Access, Access, Access!

THANK YOU

COMMENTS & QUESTIONS WELCOME
